SPENERGY.IE

1800 991 122

A large array of solar panels is shown from a low angle, looking up towards a clear blue sky. The panels are arranged in a grid pattern, with rows receding into the distance. The perspective creates a strong sense of depth and scale. The panels are dark blue with visible silver grid lines.

ABOUT US

SP Energy was founded in 2021 with a goal of moving our customers to a more sustainable way of living, by switching their energy usage to battery-backed solar PV systems.

Our customers have used these systems to reduce their dependence on fossil fuels, which massively reduces their energy bills, and their impact on the planet.

As advocates for sustainable living, we understand that choosing solar power is not just a decision for today, but an investment in the future. We believe in the potential of solar energy to shape a world that thrives on renewable resources.

BENEFITS OF SOLAR PV

COST SAVING

Installing a Solar PV system will drastically reduce your dependency on the grid, which will equate to a massive reduction in your energy bills. Currently there is 0% VAT on Solar PV systems and SEAI grants available, so there's never been a better time to install a Solar PV system in your home or business.

ENVIRONMENTAL IMPACT

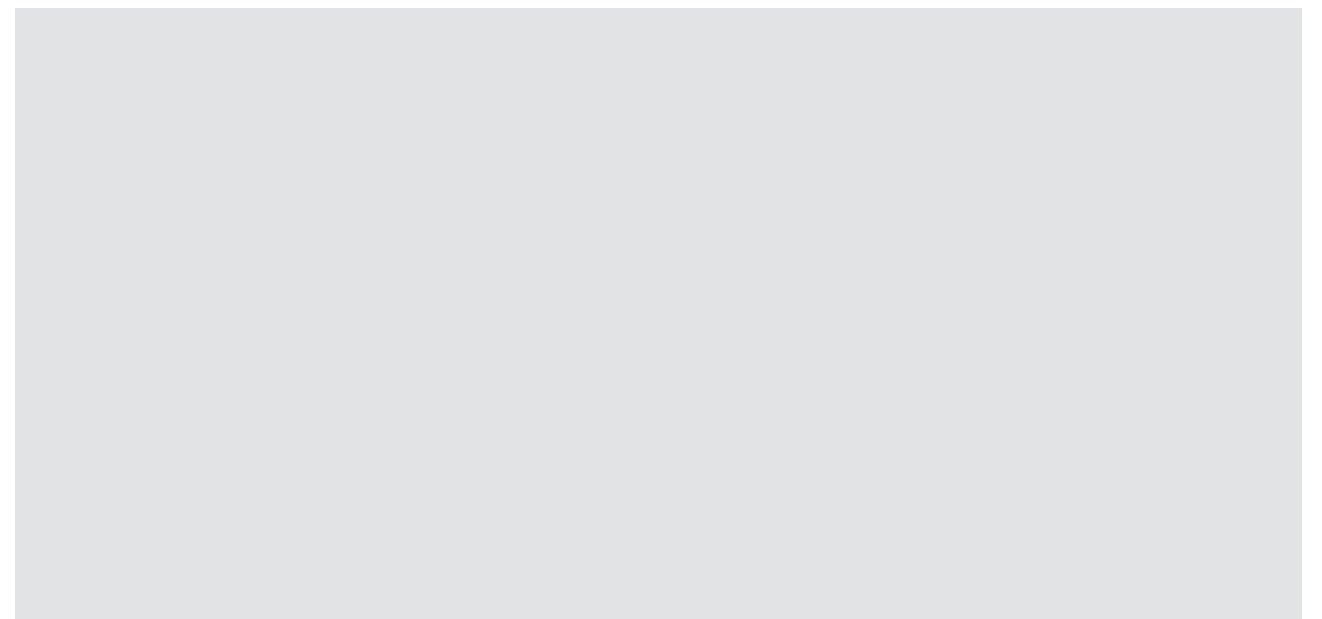

Reducing your dependency on fossil fuels is top priority for the climate. Reducing your dependency on the grid means you have more control over where your electricity comes from, and gives you the power to reduce your carbon footprint. For businesses we can also supply a break down of your energy usage and how much is being produced by your Solar PV system, for use in environmental impact reports.

ADD VALUE TO YOUR HOME

A Solar PV system is a big benefit when buying a new home, as it not only means lower energy bills, but also increases the BER rating of the property. As such, homes with Solar PV systems pre-installed are more appealing to prospective homeowners.

SYSTEM OVERVIEW

OUR PRODUCTS

We stock products from a number of different manufacturers such as Victron, Huawei, Jinko, and MyEnergi, so we can choose the best products and components on the market to suit your specific energy requirements.

CONNECTIVITY

Both Victron and Huawei wirelessly connect to your PC, Android or iPhone, which allows you to view your current energy usage, energy generation, and adjust settings etc.

SEAI GRANTS

Through the SEAI Solar Electricity Grant, residential customers can claim up to 2,400 back on the cost of a Solar PV installation. Gra

To avail of this you must make your application before the work is carried out, and once the SEAI approves your application, we take care of the rest of the paperwork and get to work on installing your new Solar PV system..

To start your application, visit seai.ie and follow the link for Solar Electricity Grant. From there, you can fill in your details on the Grant Application Portal, and select SP Energy as your registered installer. Once the installation is complete, SEAI will process your application and refund you the amount due.

FINANCE

A solar array is an investment that saves you a huge amount of money in the long term, and can only take a few years for these savings to pay back the initial investment. The lifetime cost saving benefits are huge, but a new solar array and battery system can be a substantial upfront cost, which can be a barrier to entry for many customers.

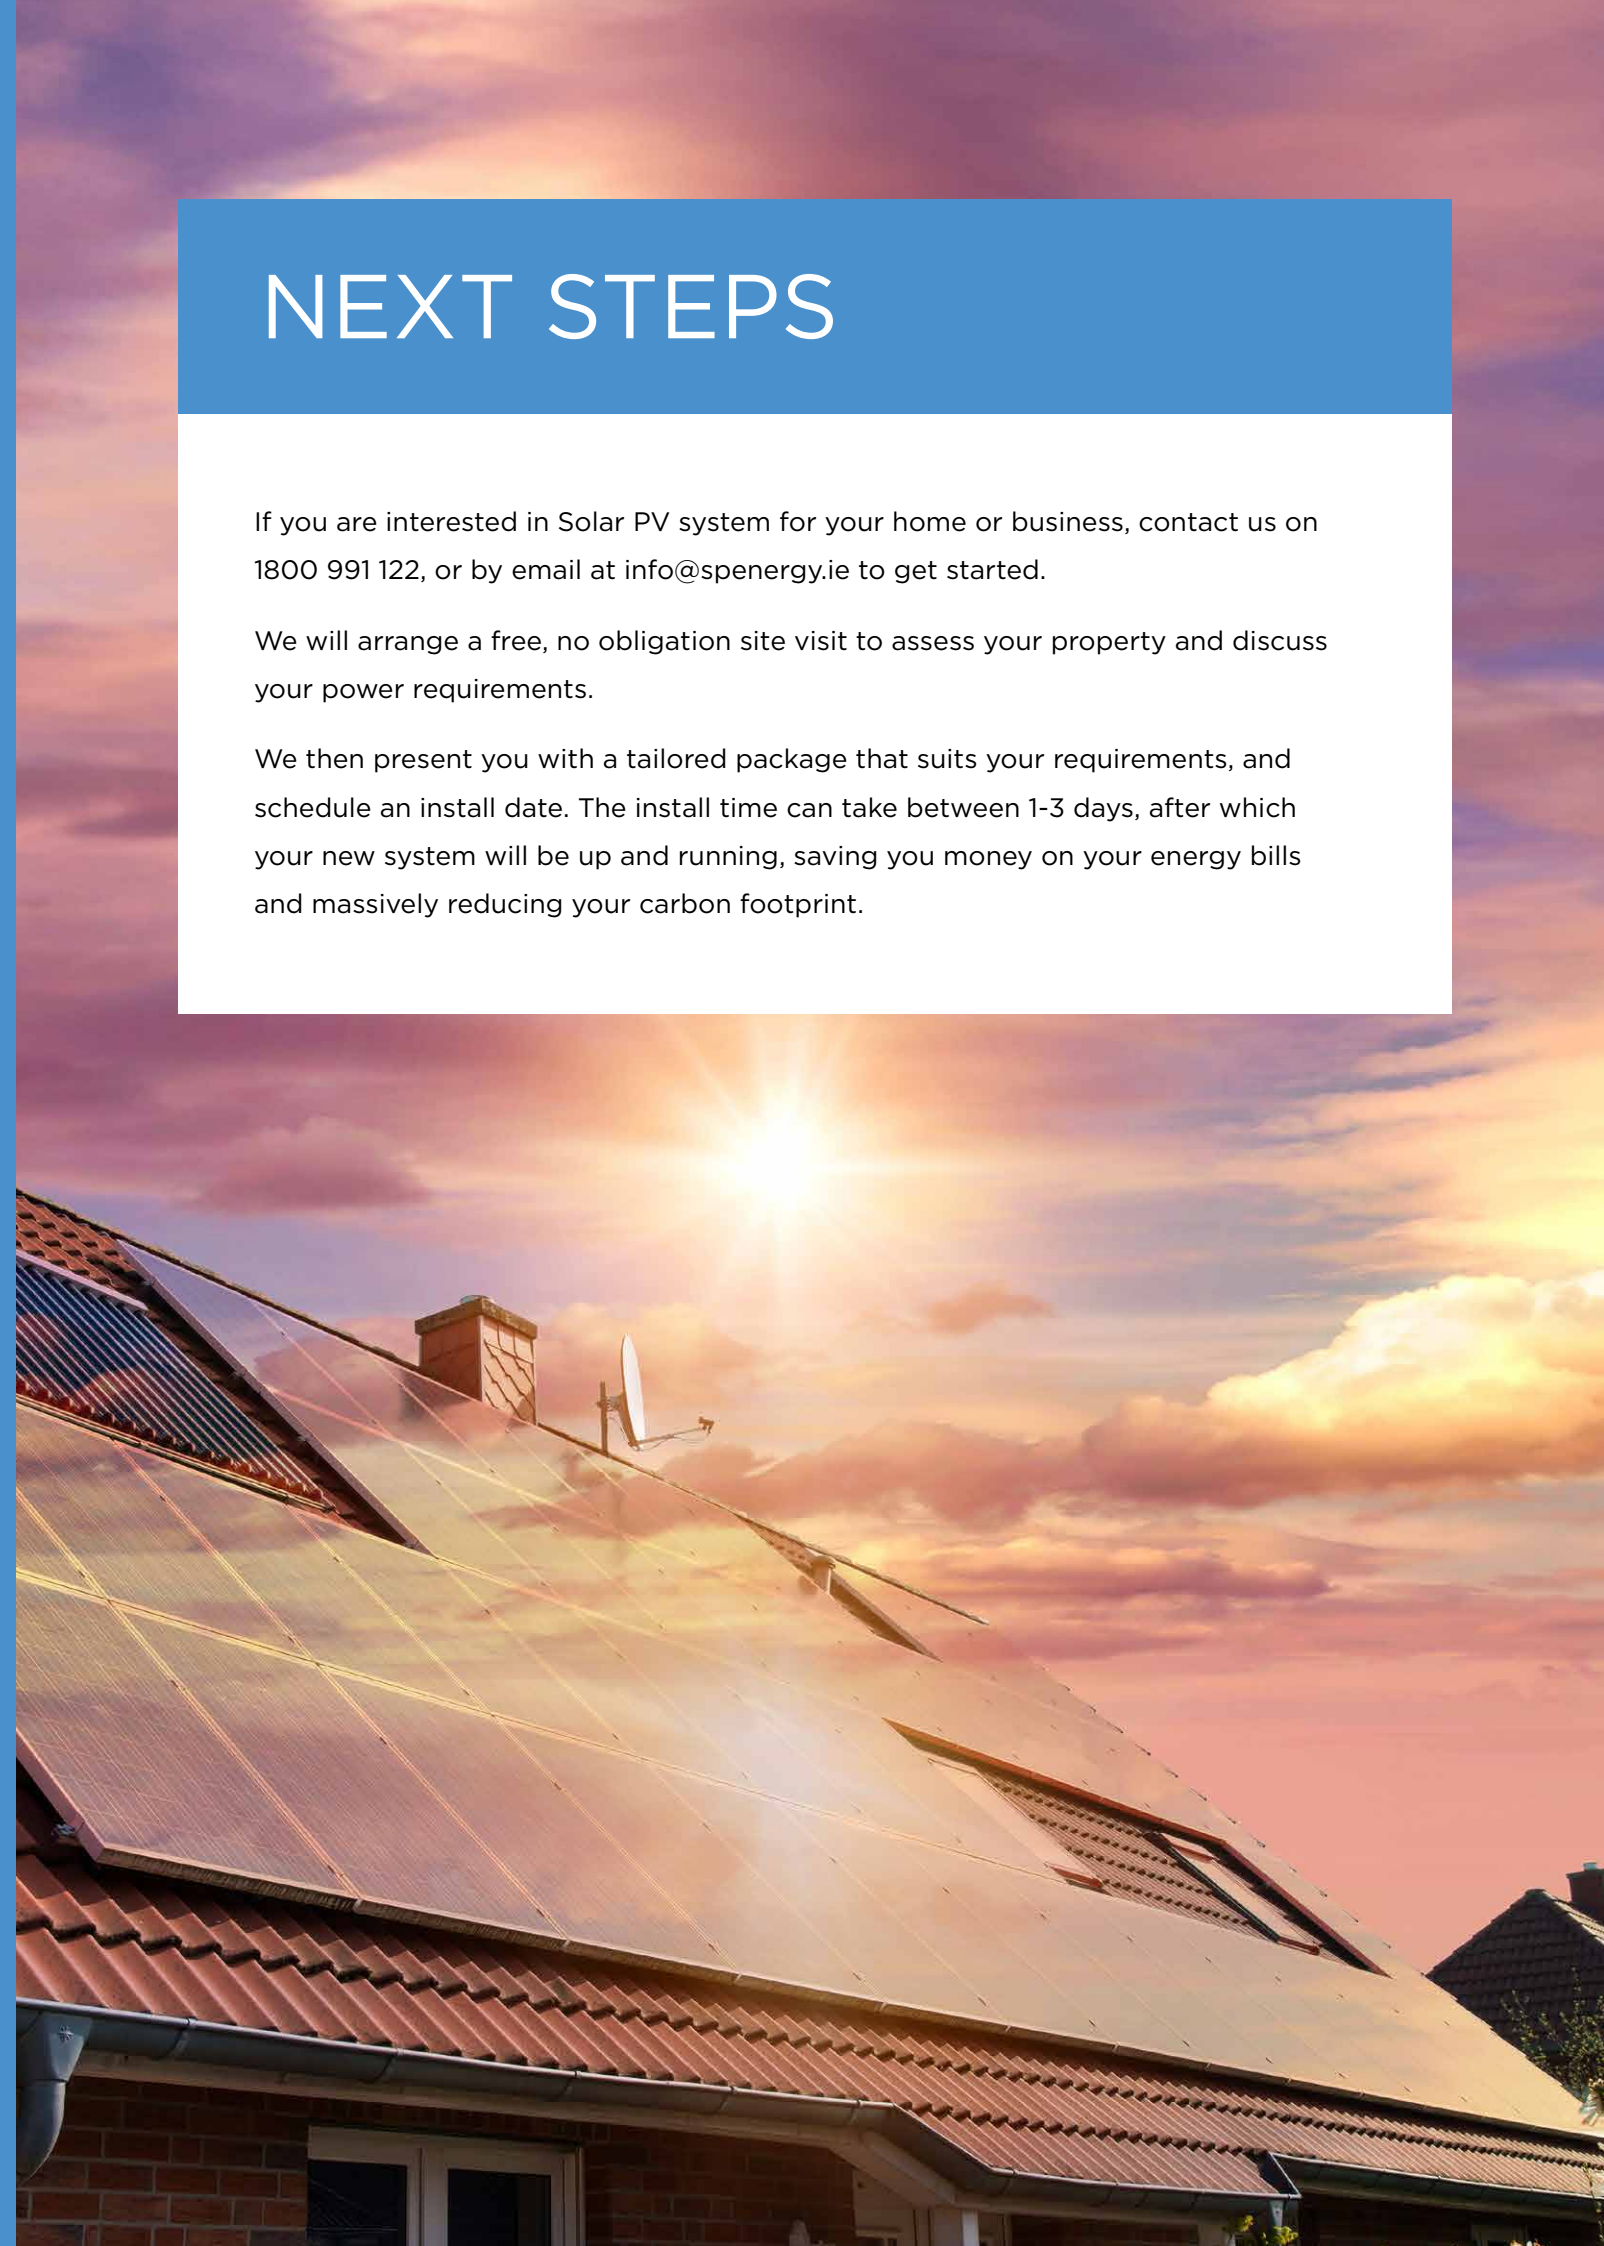

For this reason we've teamed up with Humm finance, so you can finance your Solar PV installation, and pay a fixed payment plan with 0% interest, to help with the upfront cost of the installation.

NEXT STEPS

If you are interested in Solar PV system for your home or business, contact us on 1800 991 122, or by email at info@spenergy.ie to get started.

We will arrange a free, no obligation site visit to assess your property and discuss your power requirements.

We then present you with a tailored package that suits your requirements, and schedule an install date. The install time can take between 1-3 days, after which your new system will be up and running, saving you money on your energy bills and massively reducing your carbon footprint.
